

Vinyl Sign Installation

Assuming the surface is free and clear of all dust and grease of any kind:

- Find the center mark of placement needed.
- Find center of signage
- Match the center of the sign to the center of placement, adjust for level and tack in place

During shipping or storage your top transfer tape can release from the vinyl sign. Snug it down with a credit card. Light pressure so you don't distort the top transfer or cut vinyl.

Once your sign is taped in place and the transfer sheet is snug to the vinyl, place 2 or 3 strips of removable tape over the signage. Note: some applications are better with the tape placed on the top, horizontally. (Long Skinny signs.)

Now separate the vinyl sign with the top transfer tape, leaving behind the silicone backing sheet.

Careful not to create folds or creases.

Cut away half of the backing sheet that is exposed. You can use a knife or scissors. Don't tear the sheet as rough edges will stick to the adhesive vinyl.

OPTIONAL: Some applications are better with a solution of 1 - 3 drops liquid detergent to 1L water sprayed VERY lightly onto the surface. The back of the vinyl sign can also be misted.

Tip: re-wipe the surface clean from any dust that stuck to the back of your sign during placement, prior to misting.

Vinyl Sign Installation

7 You are now ready to adhere 1/2 of the vinyl sign. SLOWLY use the tool you used before to smooth down the transfer sheet, which also adheres the vinyl sign. Use SHORT and LIGHT strokes to work the sign down from the CENTER outwards.

8 Remove the remaining pieces of masking tape and REPEAT THE ABOVE PROCESS for the other half of the vinyl sign. Both pieces of the Backing Sheet are now gone and only the Vinyl Sign and Top Transfer Tape should be left on the wall.

9 Once again use the flat tool to firmly adhere the vinyl sign to the wall. Let wet applications dry for 15 mins.

10 Now you are ready to remove the Top Transfer Sheet, which reveals the vinyl sign on the surface.

Peeling off the transfer tape is best done by peeling the sheet back onto itself. Pulling up rather than rolling back can cause the vinyl to lift prematurely.

These are general instructions to apply vinyl adhesive signs. Obviously there are many different application needs and these steps can and may be necessary to be altered for conditions or specific needs.

Tips:

- Remove all dirt and grease or oils and clean all surfaces.
 - Wipe clean the back of the sign before placement.
 - Wet application takes time to dry for removal application tape.
 - Do not lift the transfer sheet straight up from the vinyl, roll it back onto itself.
 - Do not clean vinyl signs with alcohols.
 - Vinyl signs although applied take time for the adhesive to cure. Allow a minimum of 7 to 10 days for curing. 30 days is ideal.
 - Do not steam clean or use high pressure hoses onto the vinyl signage.
 - After Step 2 is complete, stand back away to view placement and level. Make adjustments if needed. If it doesn't look right it's probably not, recheck measurements.
 - Smaller signs may skip steps 1 - 7 by removing the backing sheet, applying the alignment by sight only, or even marked with tape.
- Signs are generally produced level and center to the backing sheet, or overall size.
